Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.	Applicant(s)	
10/559,559	DE HAAN ET AL.	
Examiner	Art Unit	
James A. Thompson	2625	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) OR THIRTY (30) DAYS.

WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed

after SIX (6) MONTHS from the mailing date of this communication.

1) Responsive to communication(s) filed on 02 December 2005 and 02 February 2006.

If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).

Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any

earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-8, drawn to an apparatus, method, and computer readable medium
 which generates a content controlled summary from input video data,
 synchronizes the content with audio data, and encodes the summary along with
 the audio for transmission.
- II. Claims 9 and 10, drawn to a system and method which receives an information request from a user, searches for and extracts the information from a database, synchronize the content control summary with continuous audio data, and encodes the summary along with the continuous audio for transmission.
- III. Claims 11 and 12, drawn to an audio stream, and a content video summary stream created from key-frames of an input video signal, wherein the audio stream is synchronized with the video stream for broadcast.
- IV. Claims 13 and 14, drawn to a decoder and method which decodes a base stream in a received information stream, up-converts the decoded base stream, decodes an enhanced stream in the information stream, and combines the up-converted base stream and the enhanced stream, wherein the combined stream has still video images which are synchronized with an audio stream.
- V. Claims 15 and 16, drawn to a method and device which decodes an audio stream, decodes a video summary stream, and reproduces the decoded audio stream and

Art Unit: 2625

the decoded video summary stream in a synchronized fashion as indicated by a bitstream

The inventions are distinct, each from the other because of the following reasons:

Inventions I-V are directed to related apparatuses and methods. The related inventions are distinct if: (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(i). In the instant case, the inventions as claimed have different functions. One generates a content controlled summary from input video data, synchronizes the content with audio data, and encodes the summary along with the audio for transmission. A second receives an information request from a user, searches for and extracts the information from a database, synchronize the content control summary with continuous audio data, and encodes the summary along with the continuous audio for transmission. A third is an audio stream, and a content video summary stream created from key-frames of an input video signal, wherein the audio stream is synchronized with the video stream for broadcast. A fourth decodes a base stream in a received information stream, up-converts the decoded base stream, decodes an enhanced stream in the information stream, and combines the up-converted base stream and the enhanced stream, wherein the combined stream has still video images which are synchronized with an audio stream. A fifth decodes an audio stream, decodes a video summary stream, and reproduces the decoded audio stream and the decoded video summary stream in a synchronized fashion as indicated by a bitstream. The five inventions appear from the record not to be obvious Application/Control Number: 10/559,559

Art Unit: 2625

variants. Furthermore, as noted, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above <u>and</u> there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:

- (a) the inventions have acquired a separate status in the art in view of their different classification;
- (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;
- (c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);
- (d) the prior art applicable to one invention would not likely be applicable to another invention;
- (e) the inventions are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

Applicant is advised that the reply to this requirement to be complete must include

(i) an election of a invention to be examined even though the requirement may be traversed (37

CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an

Application/Control Number: 10/559,559

Art Unit: 2625

election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James A. Thompson whose telephone number is (571)272-7441. The examiner can normally be reached on 8:30AM-5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward L. Coles can be reached on 571-272-7402. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
